AGENCYOS

System Brief & Business Case

RestoRefine Studios Ltd · April 2026 · INTERNAL

01 EXECUTIVE SUMMARY

AgencyOS is RestoRefine Studios' internal operating platform — a single workspace that replaces fragmented spreadsheets, WhatsApp threads, and manual processes with a structured, real-time command centre for managing clients, content, revenue, and new business.

As the agency scales toward 10–30 clients across hospitality, events, and local business, the operational overhead of managing different package structures, upload deadlines, invoice chasing, video approvals, and onboarding checklists becomes unsustainable without a dedicated system. AgencyOS solves this.

02 THE PROBLEM WITHOUT A SYSTEM

- Client deadlines are tracked mentally or via informal notes — missed uploads damage client trust
- Invoice chasing is reactive, not scheduled — revenue leaks through late or forgotten payments
- New business leads are managed ad hoc — no visibility on pipeline value or conversion rate
- Onboarding is inconsistent — clients experience different quality depending on who handles it
- Video approval feedback loops are untracked — revisions get lost in email or WhatsApp
- Contracts are generated manually each time — no template enforcement, no audit trail
- No single source of truth — Rohit, Rohin, and Harpreet work from different information

03 FEATURE BREAKDOWN & BUSINESS RATIONALE

Live Dashboard

What it does: Real-time view of MRR, unpaid invoices, urgent tasks, pipeline value, and pending video approvals.

Why it matters: Removes the need for a daily manual check across multiple sources. One glance = full agency status.

Efficiency gain: Saves 20–30 mins per day in status checks and reduces the risk of missed critical actions.

Client Management

What it does: All active clients in one view with package details, payment status, invoice dates, and

quick actions.

Why it matters: At 10+ clients with different package structures and billing dates, mental tracking is not scalable.

Efficiency gain: Instant visibility on who owes money, what they're on, and when to follow up — no chasing through notes.

Invoice & Payment Tracking

What it does: Per-client payment status with one-click mark-paid and upcoming invoice date tracking.

Why it matters: Cash flow is the lifeblood of an agency. Overdue invoices directly impact contractor pay and operations.

Efficiency gain: Reduces average invoice-to-payment time and eliminates revenue leakage from forgotten billing.

Sales Pipeline (Kanban)

What it does: Visual pipeline board tracking leads from Outreach through Meeting, Proposal, Negotiation, to Signed.

Why it matters: Without structure, warm leads go cold. The pipeline ensures every prospect has a clear next action.

Efficiency gain: Improves close rate by ensuring no lead is abandoned. Quantifies pipeline value at a glance.

Content Calendar

What it does: Chronological view of all upcoming posts, uploads, shoots, and deadlines across every client.

Why it matters: Content delivery is the core product. Missing a deadline or upload date directly affects client results.

Efficiency gain: Centralises scheduling so the team always knows what's due, for whom, and how urgent it is.

Client Onboarding Checklist

What it does: Per-client checklist covering contract, payment, brand assets, access, kick-off, questionnaire, and first post.

Why it matters: Inconsistent onboarding creates a poor first impression and causes deliverables to start late.

Efficiency gain: Every client gets the same quality start. Reduces back-and-forth by ensuring nothing is missed.

Video Approval Workflow

What it does: Queue of client videos with Pending / Approved / Request Edit status and one-click actions.

Why it matters: Video revision cycles currently happen over WhatsApp — context is lost, approvals are untracked.

Efficiency gain: Structures the feedback loop so no video gets posted without explicit approval, protecting the agency.

Quotation Generator

What it does: Form-based quote builder that produces a formatted quotation with unique ref, deliverables list, and validity date.

Why it matters: Manual quotes are slow to produce and inconsistent in quality — undermining perceived professionalism.

Efficiency gain: Quotes can be produced in under 2 minutes with consistent branding, improving prospect conversion.

Contract Generator

What it does: Auto-populates branded contracts from client and package data, generating a download-ready PDF.
Why it matters: Manually editing contract templates introduces errors and takes time that compounds across clients.
Efficiency gain: Eliminates template errors, speeds up contract turnaround, and creates a consistent legal paper trail.

Client Portal

What it does: Per-client view showing their account overview, video approval status, and onboarding progress.
Why it matters: Clients frequently ask for status updates — answering these manually is a drain on account management time.
Efficiency gain: Reduces inbound status queries and gives clients transparency, improving satisfaction and retention.

04 EFFICIENCY IMPACT SUMMARY

Area	Without AgencyOS	With AgencyOS
Daily status check	20–30 min across multiple sources	< 60 seconds on Dashboard
Invoice chasing	Reactive, easy to forget	Visible, one-click action
Lead management	Mental / WhatsApp-based	Structured Kanban with £ value
Client onboarding	Inconsistent, varies by person	Standardised 8-step checklist
Video approvals	Lost in WhatsApp threads	Tracked queue with status
Quoting	10–20 min per quote	< 2 min with generator
Contract creation	Manual template editing	Auto-populated, download-ready

05 WHY THIS MATTERS AT SCALE

RestoRefine Studios is built to operate at 10–30 clients simultaneously. At that volume, every manual process compounds: a 5-minute task done 20 times per week is 100 minutes lost. AgencyOS is designed to keep operational overhead flat as client count grows — meaning the team can take on more clients without proportionally more admin.

The system also reduces key-person dependency. With a shared source of truth, Rohit, Rohin, and Harpreet can operate independently without briefing each other on current client status — a critical requirement for a growing delivery team.

06 NEXT STEPS

- Upload contract template → auto-population and PDF download wired in
- Connect to Google Drive → contracts and quotes auto-saved to client folders
- Add team login separation → Rohin and Harpreet see relevant views only
- Set up automated invoice reminders → email/WhatsApp trigger on due date
- Export content calendar to shared Google Calendar → visible to full team
